

Release Notes for LEO patch initiated on 3/10/11

The next LEO patch (LEO Udate) is scheduled for 3 pm, 3/10/11. Please inform your users that the system will be off line for a couple hours while the patch is installed.

Major changes

- HE/RR Intervention Progress Report now functioning (see notes below)
- Ability to select “inactive agencies” throughout LEO selection pages
- Rapid Test Kit expiration date now at end of the month rather than beginning
- Validation to DOB initiated, will question clients less than age 13 prior to being able to save
- Training history moved into C&T staff information
- Location number has been added to location drop down list when selecting interventions

Notes regarding HE/RR Intervention Progress Report

A WebEx training regarding the Intervention Progress Report will be provided in April. The training will be recorded for access on an ongoing basis. In the interim you may contact your Operation Advisor or Deanna Sykes if you have questions.

- IF you select too many agencies or interventions, the report may fail to generate. If so, select fewer agencies or interventions. A set of tables is generated for each agency and intervention distinctly. No aggregate reporting is done within the Intervention Progress Report processing.
- In the location selection field, you may see a couple locations that are not part of the intervention, or maybe not even a part of your LHJ. You can ignore these locations. We are working to remove them but in the meanwhile they will not impact the Report results.
- The results may not be as you anticipated, especially if you defined your target population too narrowly. You can work with Kevin Sitter to refine your target populations as long as it is not changing the original target populations significantly. This will be discussed in the training.
- The intervention Progress Report can be run for open or closed interventions going back to July 1, 2008. You cannot analyze ELI data with this report.
